- Alaska – Sue Benz, State Statistician

Mild Weather and Excellent Growing Conditions for Idaho

Days suitable for fieldwork were 6.4. Pasture and range conditions were reported to be 1% very poor, 2% poor, 20% fair, 58% good, and 19% excellent. Low temperatures were reported at 30 degrees Fahrenheit in the northern and south central regions and a high temperature of 91 degrees Fahrenheit in the south central region, with a statewide temperature differential of 10 degrees below normal to 4 degrees above normal. The mild to warm weather really pushed crop growth. The wheat crop especially benefited from the weather, growing substantially during the week. Almost all spring planting was completed or coming to a close. Irrigation remained a major activity across the state. First hay cuttings started to pick up with some areas onto a second cutting. Teton County reported scattered thunderstorms affected timing and delayed the first cutting of hay. Caribou County reported cattle were all out to summer range. Overall livestock looked good. Most crops were in good to excellent condition.

Rain Showers and Moderate Temperatures Returned to Oregon

There were 5.5 days suitable for fieldwork last week. Pasture and range conditions were reported to be 10% very poor, 11% poor, 31% fair, 43% good and 5% excellent. The low temperature was reported at 24 degrees Fahrenheit in the south central region and the high temperature was reported at 88 degrees Fahrenheit in the southeast region, with a statewide temperature differential of 1 to 11 degrees below normal. In the northwest region, wheat stands looked good. Winter wheat showed some aphid issues. Grass seed cutting began in selected areas. Irrigation was in full swing on most row crops. Light rains limited harvesting in some areas. Some turnips were combined. Cooler temperatures slowed maturity of cereal grains and berries. Crimson clover and rye grass were swathed. Field corn was knee high. Blueberries and raspberries were abundant. Cherries and walnuts were sizing. The last sweet corn crops for processors were planted and irrigated. Buffalo and bovine calves were doing well. Pastures were drying out which resulted in supplemental feeding. In the north central region, wet conditions resulted in considerable damage to cherries in Sherman County. Wasco County continued harvesting Bing cherries, but cooler weather resulted in some growers waiting for cherries to ripen. Rain caused some damage to cherries in the Mosier Valley. In the northeast region, the second cuttings of hay were rained on. Cherries were split by rain. The southeast region reported some parts of Malheur County were still dry and that this year was a tougher year on ranges than previous years. Small grain hay harvest began in Lake County. Crook, Deschutes and Jefferson Counties reported alfalfa and grass hay cuttings got wet and laid in the fields. Frost was reported in certain areas of Deschutes County and other areas across central Oregon.

Field Crops Were Doing Well In Washington State

There were 6.0 days suitable for field work. Pasture conditions were reported as 5% poor, 20% fair, 63% good, and 12% excellent. Temperatures throughout the state ranged from a low of 32 degrees Fahrenheit in the east central and central regions to a high of 85 degrees Fahrenheit in the east central region, with a statewide temperature differential of 2 degrees to 11 degrees below normal. Pasture and forage conditions were in good condition throughout the state. In western Washington, pastures benefited from the rain and started to show signs of peak growth. In eastern Washington, pastures were doing well. In Jefferson County, dry hay was harvested one month earlier than usual. In Douglas County, the winter wheat crop was in good shape in both the dryland and irrigated fields. Grain heads were very full compared to previous years. Potato plants appeared to be in good condition, as was the case overall for all crops in Douglas County. Field crops also looked good in Asotin and Garfield Counties. Silage corn looked good in Clallam, Jefferson, King and Snohomish Counties. In Yakima County, vegetable crews harvested green and yellow beans, peas, and zucchini. In Klickitat County, dry beans, peas, potatoes and onions were in good condition. Wheat harvest just began in the drier areas. In Whatcom County, strawberry harvest was in full swing. Raspberry harvest was beginning. Earlier varieties of blueberries were also ripening.

Summary based on NWS data.

Season cumulative precipitation starts: September 1, 2015.

DFN = Departure from normal.

NA = Data not available.

Precipitation (rain or melted snow/ice) in inches.

Precipitation days= Days with precipitation of 0.01 inch or more.

Air temperature in degrees Fahrenheit.

Normals period 1971-2000 used in DFN calculations.

For more weather information visit www.awis.com or call 1-888-798-9955.

Access to NASS Reports

For your convenience, you may access NASS reports and products the following ways:

- All reports are available electronically, at no cost, on the NASS web site <http://www.nass.usda.gov>
- Both national and state specific reports are available via a free e-mail subscription. To set-up this free subscription, visit <http://www.nass.usda.gov>. Hover over the “Publications” drop down. Under "Receive reports by Email" section in the lower right corner, select the report(s) you would like to receive.

For more information on NASS surveys and reports, call the NASS Agricultural Statistics Hotline at (800) 727-9540, 7:30 a.m. to 4:00 p.m. ET, or e-mail: nass@nass.usda.gov.
